Continuation of Substance of Interview including description of the general nature of what was agreed to if an agreement was reached, or any other comments: Applicants' assertion that the Examiner must interpret the term "face pose" as recited in the claims to mean the pitch, roll, and yaw angles that describe the position of a person's head was discussed. Considering numerous publications (IEEE, ACM, SPIE, etc.) for face recognition that define a "face pose" by only one rotation angle, Applicants are requested to provide evidence (technical definition) that "face pose" must include all three (roll, yaw, and pitch) components. The Examiner refers to page 19 of Applicants' disclosures in which "face pose" for depicting the persons could be any combination of pitch, roll, and yaw angles and further shows that in technical literatures "3D face pose" is the technical term for using three angles for face detection.
